TITLE: Training for the "Fox Hunting" Competitions (Trenirovka k sorevnovaniyam "Okhota na lis")

PERIODICAL: Radio, 1957, # 9, p 12-13 (USSR)

ABSTRACT: This article describes the training for the "Fox Hunting" competition, which consists in finding out a transmitter called "fox", giving signals of various durations and at different intervals. It has a power of about 2 watts and an antenna having the form of a half-wave pin, and a counter-balance of 4 wires, each of them having a length equal to the wavelength.

The receiver utilized for detecting the "fox" is a simple 4-tube super-regenerator designed according to the circuit diagram 1-V-2 with "1K1Π" and "2Π1Π" type tubes, having a frequency band of 38-40 megacycles. Power is furnished by the same batteries as utilized in "Turist" and "Dorozhny" receivers. The antennas to be utilized with this receiver were specially designed as shown by figures 1 and 2. The first one is a loop vibrator with reflector. The second one consists of copper or aluminum pipes having a diameter of 8-10 millimeters

Card 1/2

TITLE: Increased reliability of electrical equipment of ZD6 and ZD12 diesel engines

SOURCE: Rechnoy transport, no. 6, 1966, 29

TOPIC TAGS: electric equipment, electric distribution equipment, diesel engine / ~~ST-711, ST-712, ST-722, RS-400, KM-600DV, KS-31M, VK-317, EZ-30, AZSG-50~~
ZD12 diesel engine, ~~ST-711, ST-712, ST-722, RS-400, KM-600DV, KS-31M, VK-317, EZ-30, AZSG-50~~
~~KS-31M push button, EZ-30 fuse box, AZSG-50 magnetic switch~~

ABSTRACT: The measures taken for increasing the reliability and endurance of various electrical equipment used for operations of ZD6 and ZD12 diesel engines are discussed. Old ST-712 starters are replaced by new ST-722 types and new KM-600DV contactors are used instead of old RS-400 contacts. New VK-317 push-buttons are used in place of KS-31M type and the replacement of obsolete EZ-30 fuse boxes by AZSG-50 automatic switches (28v, 50 amp) is proposed in 1966. Some other measures to be taken in the future are also mentioned.

TITLE: Experimental investigation of the functioning of an open reinforced concrete span structure under horizontal loads

SOURCE: Beton i zhelezobeton, no. 12, 1965, 18-20

TOPIC TAGS: reinforced concrete, stress analysis

ABSTRACT: Experimental investigations into the operation of an open span under the influence of horizontal loads reveal considerable deviations of the actual stress state of the structure from the results of an approximate theoretical calculation and show that the calculation methods now in use are suitable only for approximate estimates of force factors in the structure. The final calculation should be made by a stricter method, consideration being given to the functioning of the structure as a spatial system, allowing proper distribution of material among the individual elements of the span and, therefore, more efficient planning of the structure. The method now in use, based on technical conditions SN 200-62, should be made more accurate. Tables are presented comparing the stress experimentally found for each structural member with that calculated by the formulas. The experiments were performed with a plexiglas model of the reinforced concrete structure under consideration. A photograph and diagram of the model are presented. Orig. art. has 2 figures and 3 tables. [DPRS]

ABSTRACT: Some new designs of lining chutes developed by Giprokoks are described. Coal preparation plant - steel plate lining; washeries - for conveying small sizes 12 - 15 mm with water - glass sheets (not thermally treated) and for conveying larger sizes - steel sheets; chutes for coke - diabase plates. Methods of lining chutes are illustrated. There are 2 tables and 3 diagrams.
